Subject: Dioxin in Sediment

Mr. Wild,

The following is in response to your query: *We have various dredge sediment testing projects near the San Jacinto Dioxin Waste Disposal Pits Superfund Site and would like to know the latest regulations related to dioxin in sediments. Can you give me some guidance or refer me to the appropriate regulations? Thanks.*

The Superfund program has information on the cleanup of dioxin at Superfund sites, as well as the cleanup of contaminated sediments at Superfund sites. Information on the cleanup of dioxin can be found at: <https://www.epa.gov/superfund/dioxin-superfund-sites>

Information on cleaning up contaminated sediments at Superfund sites can be found at: <https://www.epa.gov/superfund/superfund-contaminated-sediments>

Please note that dredging and construction that may impact the sediments should be coordinated through the U.S. Army Corps of Engineers, Galveston District.
